

Introducing

UltraFlora® Integrity

Targeted to Help Support Intestinal Immune Health*

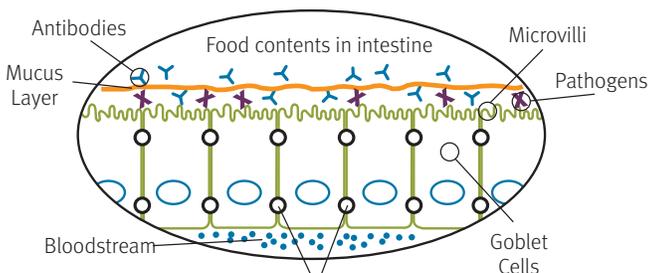

Healthy functioning of the intestinal barrier is important to ensure only the appropriate molecules pass into the bloodstream and lymphatic system. The intestinal barrier is supported by multiple mechanisms, including tight junctions between intestinal epithelial cells, which can be influenced by the bacteria of the intestinal microbiome. Supporting tight junctions may aid healthy intestinal permeability.

Why UltraFlora Integrity?

- Features 100 million CFU of patented probiotic strain *Lactobacillus salivarius* UCC118, which preclinical studies suggest may influence tight junctions between intestinal cells*¹
- Preclinical research suggests that *L. salivarius* UCC118 may beneficially influence immune cell signaling processes*^{2,3}
- After consumption, *L. salivarius* UCC118 colonizes the gut and may persist there for several days^{4,5}
- Backed by the Metagenics ID Guarantee for purity, clinical reliability, and predicted safety via scientific identification of strains with established health benefits
- Gluten-free, non-GMO, and vegetarian

Healthy Intestinal Cells with Tight Junctions

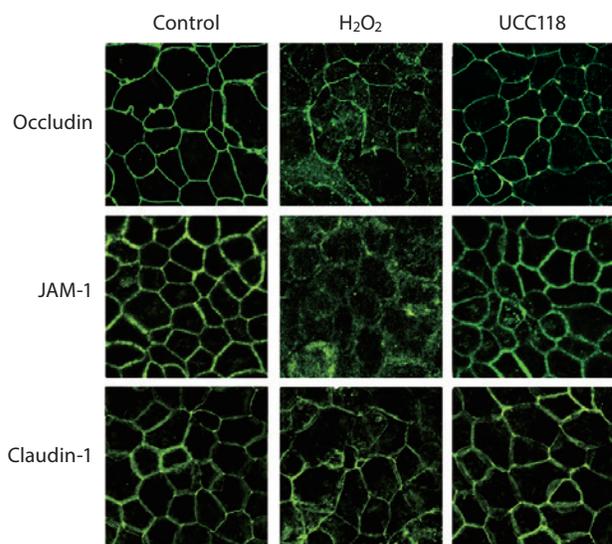

Tight junctions between epithelial cells regulate paracellular transport and contributes to a healthy intestinal barrier

Scientific Rationale

In an *in vitro*, validated model of human intestinal epithelial cells, researchers assessed the effects of *L. salivarius* exposure on localization of tight junction proteins by confocal microscopy.¹

- Hydrogen peroxide (H₂O₂) exposure disrupted and redistributed the tight junction proteins occludin, JAM-1, and claudin-1.¹
- Pretreatment with *L. salivarius* UCC118 helped maintain tight junction protein integrity (Figure 1).^{*1}
- In separate preclinical research, *L. salivarius* UCC118 has been shown to produce a bacteriocin, a beneficial protein that may influence intestinal microbial composition.*^{3,6,7,8}
- In another study, UCC118 has been found to adhere to the colon in humans after oral intake.⁵

Figure 1. Effect of *L. salivarius* UCC118 strain on H₂O₂-induced relocalization of tight junction proteins*¹

Form: 30 Capsules

Serving Size: 1 Capsule†

Lactobacillus salivarius UCC118 100 million CFU**

Other Ingredients: Starch, pregelatinized starch, capsule (hypromellose), and magnesium stearate (vegetable).

Directions: Take one capsule daily or as directed by your healthcare practitioner.

This product is gluten-free and vegetarian.

Caution: Keep out of the reach of children.

Storage: Keep tightly closed in a cool, dry place.

†Vegetarian capsule

**At date of expiration

Complementary Products:

- **Glutagenics®:** Powerful gastrointestinal lining support*
- **CandiBactin BR® or CandiBactin AR®:** For support of a healthy microbial balance*
- **D₃ 10,000 with K₂:** High potency, bioactive vitamin D with vitamin K*
